STORIA / HISTORY

Fondata nel 1965 a Vigodarzere (Pd), Elbi si è sempre contraddistinta per la varietà di gamma e la vocazione internazionale. L'azienda opera infatti da quasi 50 anni nel campo della termoidraulica, costruendo nel tempo una solida reputazione ed immagine di se stessa nei maggiori mercati mondiali.

Nata originariamente come produttore di bollitori e caldaie, dopo una decina d'anni l'azienda ha concentrato le proprie attività produttive nella produzione di serbatoi per l'industria termoidraulica.

Verso la metà degli anni '70 Elbi avvia la produzione di autoclavi e vasi di espansione a membrana, diventando uno dei maggiori produttori europei nel settore della Termoidraulica. Ormai stretta nella sede di Vigodarzere, nel 1981 Elbi si trasferisce nell'attuale sede di Limena, espandendo così la propria capacità produttiva.

Nel 1989 l'azienda intraprende una nuova strada con la lavorazione delle materie plastiche, e avvia la produzione di serbatoi in polietilene rotazionale.

Nel 1990 viene fondata Elbi of America, Inc. con sede a Houston, Texas. Inizialmente svolge il ruolo di semplice attività commerciale, imparando a conoscere culture e mentalità di un paese vasto e complesso come il continente americano.

Nel 1994 nasce la divisione commerciale Green System, che si occupa della produzione e commercializzazione di vasi per piante e fiori in polietilene rotazionale. L'azienda entra così in un nuovo mercato, il giardinaggio e l'arredo verde, ampliando il proprio know-how nel campo sia tecnologico che commerciale. Ormai saldamente affermata nel mercato americano, nel 1996 Elbi of America diventa ufficialmente la sede produttiva per i serbatoi a membrana fissa, avvicinando la produzione al mercato di sbocco.

Nel 1997 nasce la terza divisione commerciale dell'azienda, Ambiente, che progetta e produce campane e cassonetti per la raccolta dei rifiuti urbani e commercializza una vasta gamma

di accessori per l'igiene e l'arredo urbani.

Nel 2001 viene aperto un nuovo stabilimento di produzione a Modugno (BA), dedicato principalmente allo stampaggio di prodotti realizzati in polietilene rotazionale.

L'attività Servizi per l'Ambiente avviata nel 2006 è strutturata essenzialmente come manutenzione preventiva, e avviene mediante strutture appositamente costituite (unità locali) dove vengono impiegati mezzi idonei e personale qualificato. Nel 2006 Elbi inaugura anche la divisione Parchi, e diventa distributore in Italia di strutture ludiche per l'allestimento di parchi giochi e scuole, offrendo una gamma di attrezzature per bambini dai 18 mesi ai 16 anni di età.

Nel 2008 l'azienda si introduce anche nel mercato del "Benessere", e diventa distributore nel territorio nazionale dell'innovativo percorso composto da diversi attrezzi sportivi che promuovono l'esercizio fisico all'aria aperta per adulti ed anziani. Nel 2008 prende forma anche la nuova business unit dedicata ai prodotti di design per il mercato dell'arredo.

L'esigenza di creare un'immagine dedicata al nuovo target porta ad un restyling della tradizionale divisione Green System. Dal progetto nasce la Divisione TWENTYFIRST, differenziata in GARDENART per la collezione tradizionale di vasi garden, e LIVINGART per la collezione di complementi d'arredo per il settore living.

Oggi Elbi concentra la propria attività sulle divisioni commerciali (Termoidraulica - Ambiente - 21st Garden Art - 21st Living Art) i cui prodotti vengono realizzati presso le sedi produttive di Limena e Modugno, confermando ancora una volta la propria connotazione industriale.

Established in 1965 as a steel works company at Vigodarzere near Padua, elbi has always distinguished itself for the large variety of products and its international vocation. The company has been operating for about 50 years in the field of thermo hydraulics, gradually achieving a solid reputation and standing in the major world markets.

Originally established as a producer of hot water cylinders and central-heating boilers, after about a decade of activity in this field the company dedicated its efforts to the production of tanks for the thermo hydraulics industry.

In the mid 70's Elbi began producing surge tanks and BLADDER expansion tanks, becoming one of the major European manufacturers in the field of Thermo hydraulics. In 1981, having overgrown the capacity of the Vigodarzere facility, the company moved to its present headquarters in Limena, thus expanding its production capacity.

In 1989 the company branched off into a new line of products, processing plastic materials and manufacturing rotational-moulded polyethylene tanks.

In 1990 Elbi of America, Inc. was founded in Houston, Texas. Initially the new company concentrated on simple marketing/sales activities, learning about the culture and mentality of the vast and complex American continent.

In 1994 the Green System sales division was established to manufacture and market pots for plants and flowers made of rotational-moulded polyethylene. Thus the company entered the new market of gardening, which enabled it to expand its know-how both in the technological and marketing fields.

Firmly established in the American market, in 1996 Elbi of America became the official manufacturing headquarters for the fixed-bladder tanks, thus bringing production closer to the target market. The company's third sales division, Environment, was established in 1997 to design and produce containers and bells for selective collection of waste, and to market a wide range of accessories for urban hy-

giene and decor.

In 2001 a new production facility was opened in Modugno (BA), mainly dedicated to the manufacture of products made of rotational-moulded polyethylene.

Elbi's activity in the Environmental Services started in 2006 and is mainly focused as preventive maintenance which is performed by special purpose structures (local units) where only qualified personnel are employed and adequate equipment used. In 2006 Elbi also started the Playground Division becoming the Italian distributor of a range of playground equipment for parks and schools offering a range for children from 18 months through 16 years of age.

In 2008 Elbi also entered the Well-being market, becoming the Italian distributor of a range composed of an innovative "well-being track" formed by several sporting gear that facilitates open-air physical exercise in adults and elderly people. In 2008 a new business unit consisting of design products for the furniture market took shape. The need to manage a new brand dedicated to such target brought about a restyling of the traditional Green System Division, thus giving life to the TWENTYFIRST Division, distinguished in GARDENART for the traditional collection of garden pots, and LIVINGART for the collection of furnishing accessories for the living market.

Today, Elbi concentrates its production activities in the business divisions (Thermo-hydraulics - Environment - 21st Garden Art - 21st Living Art) whose products are manufactured in the production plants in Limena and Modugno, yet again confirming the company's industrial reality.

TECNOLOGIE / TECHNOLOGIES

Attivo dal 1981, lo stabilimento di Limena è suddiviso in diverse aree produttive, ognuna specializzata in lavorazioni specifiche.

Active since 1981, the Limena plant is sub-divided into various production areas, each specialising in specific processes.

MECCANICA / MECHANICS

La trasformazione dei metalli costituisce attualmente circa il 70% delle attività produttive, e impiega tecnologie di: stampaggio, taglio e piegatura lamiere; saldatura di acciai al carbonio e acciai inossidabili; verniciatura a polveri epossidiche, e assemblaggi. L'intero processo produttivo viene realizzato con largo impiego di automazione industriale e robot per la manipolazione e movimentazione dei manufatti. L'organizzazione della produzione è monitorata da un sistema informativo aziendale integrato, partendo dall'analisi e programmazione della produzione fino alla vendita del prodotto finito. A supporto di tale struttura informativa opera inoltre il nostro Servizio Elaborazione Dati, il quale soddisfa le particolari esigenze informative implementando e sviluppando ad hoc parte del software.

The transformation of metals currently makes up around 70% of production activities, and uses technologies for: moulding, cutting and sheet bending; welding of carbon steel and stainless steel; epoxy powder painting and assembly. The entire production process is implemented with wide use of industrial automation and robots to handle and move the manufactured parts. Production is organised and monitored using an integrated company information system, starting with the analysis and planning of production up to sale of the end product. This information structure is supported by our Data Processing Service, which meets the particular information requirements by implementing and developing ad hoc part of the software.

MATERIE PLASTICHE / PLASTIC MATERIAL

Nei primi anni '90 Elbi ha voluto intraprendere una nuova strada produttiva con la lavorazione delle materie plastiche, ottenendo notevoli risultati in termini di innovazione tecnologica. Dal 1996 Elbi è diventata membro di ARM (Association of Rotational Molders), un'associazione internazionale di categoria che rappresenta i suoi soci costituiti da aziende rotostampatrici e professionisti dell'industria provenienti da 66 nazioni. Il reparto stampaggio rotazionale è dotato di 9 forni per lo stampaggio del polietilene, 7 in sede centrale e 2 presso lo stabilimento di Modugno (Bari). Il forno maggiore è in grado di stampare prodotti fino ad una capacità di 15.000 litri, ed è tra i più grandi in Europa. Mediante la tecnologia dello stampaggio rotazionale Elbi realizza una vasta gamma di prodotti in polietilene atossico e riciclabile: oltre a serbatoi di prima raccolta (acqua, liquidi alimentari, chimici e altri tipi di fluidi). Elbi progetta e produce complementi d'arredo di design, vasi per piante e fiori, cucce per cani e gatti, campane per la raccolta differenziata, cassonetti per i rifiuti solidi urbani e contenitori per il compostaggio dei rifiuti organici, contribuendo alla riduzione dell'inquinamento ambientale.

In the early 90's Elbi wanted to undertake a new production path by processing plastic materials, obtaining considerable results in terms of technological innovation. Elbi has been a member of ARM (Association of Rotational Molders) since 1996, an international category association that represents its members composed of rotational-moulding companies and professionals in the industry from 66 nations. The rotational moulding division has furnaces for polyethylene moulding, 7 in the main plant and 2 in the Modugno (Bari) plant. The biggest furnace can mould products with a capacity of up to 15.000 litres, among the biggest in Europe. Through rotational moulding technology, Elbi can manufacture a vast range of products in non-toxic and recyclable polyethylene: other than the first collection tanks (water, alimentary liquids, chemicals and other types of fluids). Elbi designs and manufactures design furnishing accessories, vases for plants and flowers, dog and cat houses, bins for differentiated waste collection, bins for urban waste collection and containers for composting of organic waste, thereby contributing to reduced environmental pollution.

RAIN BASIC

RAIN BASIC CON POMPA SOMMERSA

NOTE IMPORTANTI:

Ricordiamo che:

- Prima di procedere con l'installazione del sistema di raccolta dell'acqua piovana, è necessario far valutare le caratteristiche idrogeologiche e morfologiche del terreno;
- È necessario leggere attentamente le istruzioni di installazione fornite a corredo del sistema;
- L'installazione deve essere eseguita a regola d'arte da un tecnico specializzato;
- Una corretta procedura di installazione, assieme ad una regolare pulizia del filtro, è fondamentale per il buon funzionamento del sistema nel lungo periodo.
- L'acqua erogata dalle utenze collegate all'impianto di recupero dell'acqua piovana non è potabile.
- Per l'interramento seguire sempre le istruzioni.

Remember that:

- Before proceeding with installation of the rainwater collection system, you must assess the hydro-geological and morphological features of the ground;
- It is necessary to read the installation instructions supplied with the system carefully;
- Installation must be carried out as state-of-the-art by a specialist technician;
- A correct installation procedure, together with regular cleaning of the filter, is fundamental for a good and long-lasting working system.
- The water supplied from the utilities connected to the rainwater recovery system is not drinkable.
- For underground installation, always follow the instructions.

 FAP 100 Filtro autopulente interno cisterna (fino a 200 m2)	L3A0031
FAP 150 Filtro autopulente interno cisterna (fino a 650 m2)	L3A0032

ACCESSORI PER RAIN SYSTEM

RAIN SYSTEM ACCESSORIES

GRUPPO FILTRO E RICAMBI PER AFFINAMENTO ACQUE METEORICHE

FILTER GROUP AND SPARE PARTS FOR RAINWATER REFINEMENT

Il kit filtrazione acque meteoriche rimuove sedimenti odori e colori nell'acqua piovana garantendo così un'ottima qualità. Il sistema viene montato tra la elettropompa di mandata e le utenze.

The rainwater filtration kit removes sediments, odors and colors in rainwater thus ensuring excellent quality. The system is mounted between the delivery electric pump and the utilities.

MODEL	CODE
Gruppo filtro con cartucce filtranti	L3Y0003
Cartuccia ricambio CCP 20 SX 25 Micron	L3Y0004
Cartuccia ricambio CB/EC SX 10 Micron	L3Y0005
Cartuccia ricambio RAH 90 Micron	L3Y0006

DEBATTERIZZATORE LAMPADA UV

ANTIBACTERIAL UV LAMP

Debatterizzatore lampada UV per disinfezione acque piovane costituita da una camera di reazione intubata realizzata in acciaio inox, lampade tradizionali ad alta intensità (tipo LPHO), un quadro elettrico per la gestione del cablaggio di collegamento.

Antibacterial UV lamp for rainwater disinfection consisting of a ducted reaction chamber made of stainless steel, traditional high intensity lamps (LPHO type), an electrical panel for managing the connection wiring.

MODEL	CODE
debatterizzatore UV 2,7 m3/h	L3Y0007 00006
debatterizzatore UV 5,2 m3/h	L3Y0007 00007
debatterizzatore UV 12 m3/h	L3Y0007 00008

DEGREASER (DG / DG-PRO)	+	BIOLOGICAL TREATMENT THROUGH EXTENDED AERATION ACTIVATED SLUDGE (FOT)					

Note:

a) Imhoff tanks are usually preferred instead of septic tanks. Check local ordinances before the installation of septic tanks as they could be only allowed in case of replacement within existing plants or if required by local government.

b) The outlet of the aerobic percolating filters is fitted on the bottom of the tanks. In case of no slope to allow washing off the filter, it is recommended to uplift the sewage liquid in order to force its drainage.

q) The outlet of the aerobic percolating filters is fitted on the bottom of the tanks. Solid particles flow away spontaneously. It is recommended to install after the aerobic percolating filters an additional septic tank in order to avoid that solid particles may contaminate the environment.

In case of drainage directly on soil, the secondary septic tank must be installed also after anaerobic filters.

d) When phytodepuration is carried out after degreaser and imhoff tanks an absorption area of $4/6 \text{ m}^2/\text{E.P.}$ is required.

In case of phyto-depuration as refining tertiary system an absorption area of 1 m²/E.P. is required

e) A stream must guarantee at least 120 days p/year of water flow. If this flow is not ensured, the final outlet has to be considered as wastewater on soil

f) For secondary treatment systems, please contact us.

g) For system with final destination as irrigation, please contact us.

N.B. Prior to installation, always contact the local responsible for obtaining the necessary permits for the dumping of the waste.

Esempi d'installazione per degrassatori, fosse settiche e vasche biologiche

Examples of installation for Grease traps, Septic tanks and Biological tanks

Prima di scegliere il tipo di impianto da installare, consultare le normative locali e le autorità preposte al rilascio dell'autorizzazione allo scarico.

Before choosing the type of system to be installed, you must consult the local regulations and the authorities responsible for issuing the "re-released into the environment" authorization.

DEGRASSATORE DG + VASCA IMHOFF | GREASE TRAP DG + IMHOFF TANK

- (1) Scarichi acque grigie provenienti da cucina, bagni e lavanderia.
N.B Gli scarichi non devono defluire direttamente nella vasca Imhoff. Si consiglia di installare un degrassatore DG a monte della vasca Imhoff.

Grey water drains coming from the kitchen, bathrooms and laundry.
N.B The drains must not flow directly into the Imhoff tank. You are advised to install a grease trap DG upstream of the Imhoff tank.

- (2) Le acque nere non devono mai defluire nel degrassatore

Black water must neverflow into the grease trap

DEGRASSATORE DG-PRO + VASCA IMHOFF | GREASE TRAP DG-PRO + IMHOFF TANK

- (1) Scarichi acque grigie provenienti da cucina, bagni e lavanderia.
N.B Gli scarichi non devono defluire direttamente nella vasca Imhoff. Si consiglia di installare un degrassatore DG a monte della vasca Imhoff.

Grey water drains coming from the kitchen, bathrooms and laundry.
N.B The drains must not flow directly into the Imhoff tank. You are advised to install a grease trap DG upstream of the Imhoff tank.

- (2) Le acque nere non devono mai defluire nel degrassatore

Black water must neverflow into the grease trap

DEGRASSATORE DG-PRO + FOSSA SETTICA BICAMERALE ST | GREASE TRAP DG-PRO + DUAL CHAMBER SEPTIC TANKS ST

- (1) Scarichi acque grigie provenienti da cucina, bagni e lavanderia.
N.B Gli scarichi non devono defluire direttamente nella vasca Imhoff. Si consiglia di installare un degrassatore DG a monte della vasca Imhoff.

Grey water drains coming from the kitchen, bathrooms and laundry.
N.B The drains must not flow directly into the Imhoff tank. You are advised to install a grease trap DG upstream of the Imhoff tank.

- (2) Le acque nere non devono mai defluire nel degrassatore

Black water must neverflow into the grease trap

DEGRASSATORE DG-PRO + FOSSA SETTICA TRICAMERALE ST | GREASE TRAP DG-PRO + THREE CHAMBER SEPTIC TANKS ST

- (1) Scarichi acque grigie provenienti da cucina, bagni e lavanderia.
